Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Group I (Claims 1-7), drawn to a plurality of directional antenna sectors each having a respective three-dimensional region for transmitting and receiving electromagnetic signals; a plurality of access control units each having a baseband processor, classified in class 455, subclass 25 and 63.4.
 - II. Group II (Claims 8-11), drawn to a first device comprising at least one receiving controller; at least one transmitting controller; and a plurality of directional antenna sectors each having a respective three-dimensional region for transmitting and receiving electromagnetic signals; wherein each of the directional antenna sectors transmits electromagnetic signals in a predefined region responsive to coupling to a selected one of said at least one transmitting controller of the first device; wherein the selected one of said at least one transmitting controller of the first device is selectively coupled to at least one of the directional antenna sectors in order to transmit a first signal to a second device via a selected one of the wireless channels, classified in class 455, subclass 562.1.
 - III. Group III (Claims 12-20 and 38-46), drawn to An antenna system for transmitting and receiving a plurality of data packets, the system comprising: an antenna control unit; a plurality of directional antenna sectors each associated with a respective region of space for transmitting and receiving electromagnetic signals; at least one receiving controller; wherein each said directional antenna sector is at

least one of the following: a flat panel, a planar, a parabolic dish, a slotted, a micro-strip, omni and a Yagi, classified in class 343, subclass 757 and 702.

- IV. Group IV (Claims 21-37 and 47-63), drawn to An antenna apparatus comprising: a self-contained antenna structure comprising: a plurality of flat panel directional antennas, wherein each of said plurality of flat panel directional antennas is comprised of a plurality of patches arranged in a pattern; a support structure for attaching the plurality of said flat panel directional antennas, classified in class 370, subclass 352 and 353.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as a self-contained antenna structure. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, Group IV is not required for Group III and so on, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
